

Bechir Sayadi

Cloud & DevOps Engineer | Azure | Infrastructure as Code

bechirsayadi01@gmail.com | +49 178 8053303 | github.com/bach47-lab
Location: Germany (open to relocation) | B.Sc. Informatik, TU Dresden
Website: <https://bach47-lab.github.io/>

Cloud and DevOps Engineer focused on Microsoft Azure and infrastructure automation. I provision infrastructure with Terraform and Bicep, containerize services with Docker, deploy to Kubernetes with Helm, and automate delivery with CI/CD pipelines in GitHub Actions and Azure DevOps, with monitoring through Azure Monitor, Prometheus, and Grafana. My Computer Science studies at TU Dresden (B.Sc. Informatik) in operating systems, networking, and cloud computing, plus a security background, shape how I build reliable systems. Looking for a full-time Cloud or DevOps Engineer role where I can bring an automation-first approach.

TECHNICAL SKILLS

Cloud Platforms	Azure (VMs, App Service, Functions, AKS, ACR, Blob Storage, Azure SQL, VNet, NSG, Key Vault, Monitor) · AWS (EC2, S3, IAM, Lambda) · GCP (Compute Engine, GKE)
CI/CD & GitOps	GitHub Actions · Azure DevOps Pipelines · GitLab CI · Jenkins · ArgoCD (GitOps) · pipeline testing (pytest, linting) · deployment strategies (rolling, blue-green, canary)
Containers & Orchestration	Docker · Docker Compose · Kubernetes (Deployments, Services, Ingress, HPA) · Helm · Kustomize · Azure Container Registry
IaC & Config Mgmt	Terraform (modules, remote state, AzureRM) · Bicep · ARM Templates · Ansible · Azure CLI
Monitoring & Observability	Prometheus · Grafana · Alertmanager · Azure Monitor · Log Analytics · Application Insights
Linux & Systems	Linux administration (Ubuntu, Debian, Fedora, CentOS) · systemd · Nginx/Apache · Bash · networking (TCP/IP, DNS, VNet/NSG)
Scripting & Version Control	Python · Bash · PowerShell · YAML · SQL · Git (branching, pull requests, code review)
Security (basics)	Entra ID · RBAC · Managed Identities · Key Vault / secrets management · TLS

WORK EXPERIENCE

Technical Contributor - Fintech & AI Infrastructure Research <i>BRI-Technology, under the Dr. Riadh Bouhouchi Ecosystem · Remote</i>	08.2025 - 07.2026
- Contributed to core tech-stack deployment and research automating fintech and AI data pipelines - Designed and optimized automated CI/CD pipelines using GitHub Actions to accelerate code deployment - Packaged machine learning models into lightweight Docker containers for consistent, reproducible environments - Researched scalable cloud environment workflows using Infrastructure as Code (IaC) principles - Worked independently in a remote setting, maintaining clear communication and punctual delivery on all deadlines	
Student Research Assistant (SHK) - Building Climatology <i>TU Dresden · Institute of Building Climatology (IBK) · 10 h/week</i>	01.2025 - 07.2025
Wrote a C++/Qt application reading several scales in parallel and storing the measurement data of an absorption test in structured files for analysis; Git, code reviews, documentation	
Student Research Assistant (SHK) - Textile Machinery <i>TU Dresden · Institute of Textile Machinery and High Performance Material Technology · Sensor, Measurement & Actuator Research Group</i>	11.2024 - 04.2025
- Developed a simple Python GUI to visualize measurement results of textile sensors - Built a test unit for IMU sensors - Prepared measurement samples with strain sensors	

KEY PROJECTS

Microservices Deployment on Azure Kubernetes Service <i>Personal</i>	2024 – 2025
- Provisioned the full stack in Terraform - AKS cluster, Azure Container Registry, Azure SQL, VNet with proper NSG rules - with zero manual portal steps - Built an Azure DevOps pipeline that builds and pushes the Docker image and deploys to AKS via Helm, with Azure Monitor and Application Insights for visibility	
Lunar Edge - Cloud-Hosted Digital Twin for IoT Edge Robotics <i>TU Dresden Team Project · Team of 6 · 3 sub-teams · my sub-team: Digital Twin</i>	2026
Deployed Eclipse Ditto via Docker Compose on a university research-cloud VM as the digital twin platform, configuring policy management and Web of Things (WoT) Thing Descriptions	

- Built a Flask REST gateway ingesting live robot telemetry into Ditto, persisted via MongoDB, running as systemd services for 24/7 uptime independent of any developer's machine
- Implemented a SciPy-based obstacle-detection pipeline over SLAM map data and a live HTML5/JS dashboard visualizing robot position and the map in real time

Azure Infrastructure with Bicep

2025

Personal

- Deployed a Bicep-based environment - resource groups, VNet, Key Vault for secrets, and Managed Identities instead of hardcoded credentials

Flower Shop / Movie Store Full-Stack App (University Module)

2024 – 2025

TU Dresden Team Project · Team of 7

- Developed a full-stack web application using Java, Spring Boot, Thymeleaf, and SQL
- Designed a RESTful API architecture and implemented business logic and database access layers
- Collaborated in a team using Git branching strategies and agile task management

Segmented Network Infrastructure (Network Security Lab)

2026

TU Dresden Team Project · Network Security Lab · Team of 5 · (lab passed at the university)

- Designed and deployed a segmented network (router/NAT/firewall, DMZ, internal LAN) across six virtualized Linux hosts (grrml)
- Configured a BIND9 DNS server and an Apache2 web server with a Let's Encrypt TLS certificate; set up automated, encrypted backups (restic)

EDUCATION

B.Sc. Informatik (Computer Science)

2023 - present

Technische Universität Dresden

- Komplexpraktikum Service & Cloud Computing: working on digital twin
- Network Security: in-depth practical lab work on DMZ and Firewalls
- Advanced Computer Networks: TCP/IP deep-dive, routing protocols, SDN and more
- Core modules: Algorithms & Data Structures, Operating Systems, Databases, Software Engineering

Bachelor Thesis

2026

Supervisor: Prof. Dr. Ivan Gudymenko, Chair of Privacy and Security in Ubiquitous Computing

"A Comparative Analysis and Lifecycle-Oriented Tool Support for Threat Modeling in Cloud Environments with Privacy and Sovereignty Considerations"

- Compared threat modeling approaches for cloud environments (security, privacy, digital sovereignty) and built a proof-of-concept tool covering the threat lifecycle from identification to mitigation planning

Abitur - Technische Wissenschaften (Technical Sciences)

2022

Tunesien | Final Grade: 1.9

LANGUAGES

Arabic C2 · German C1 · English C1 · French C1

Currently working towards professional Azure and AWS cloud certifications.
