TU Dresden — B.Sc. Informatik, graduating Sep 2026

I am a final-year Computer Science student at TU Dresden finishing my degree in September 2025, with a focus on cloud infrastructure and security. My coursework in Cloud Computing, Network Security, Cryptography and Advanced Networking gave me a solid theoretical foundation that I have been turning into hands-on Azure skills — building real infrastructure with Terraform, AKS, and Azure DevOps. I enjoy the infrastructure side of things: setting up pipelines, locking down environments, and making sure things actually work in production.

TECHNICAL SKILLS

Azure	VMs · App Service · Azure Functions · AKS · ACR · Blob Storage · Azure SQL · VNet · NSG · Azure Firewall · Application Gateway
IaC	Terraform (AzureRM) · Bicep · ARM Templates · Azure CLI · PowerShell · Bash
CI/CD	Azure DevOps Pipelines · GitHub Actions · Docker · Kubernetes · Helm
Security	Entra ID · RBAC · Key Vault · Managed Identities · Defender for Cloud · TLS/PKI basics (learning)
Monitoring	Azure Monitor · Log Analytics · Application Insights · Prometheus · Grafana
Languages	Python · Java · Bash · PowerShell · C/C++ · YAML · SQL

PROJECTS

Microservices deployment on Azure Kubernetes Service · [Personal](#)

2024 – 2025

- Set up the full infrastructure in Terraform — AKS cluster, Azure Container Registry, Azure SQL, VNet with proper NSG rules. No manual portal clicks.
- Wrote an Azure DevOps pipeline that builds the Docker image, pushes to ACR, and deploys to AKS via Helm. Added Azure Monitor and Application Insights to keep an eye on things.

Azure environment setup with Bicep — exploring security basics · [Personal](#)

2024

- Deployed a basic Azure environment using Bicep — set up resource groups, VNet, Key Vault for secrets, and Managed Identities instead of hardcoded credentials (learned about this from the Microsoft CAF docs).
- Enabled Defender for Cloud and went through the security recommendations — got a decent Secure Score and understood what each finding meant (security is still an area I am actively learning).

TLS handshake implementation + Azure API Management · [University-inspired](#)

2024

- Implemented a simplified TLS handshake from scratch in Java — RSA key exchange, Diffie-Hellman, AES. Came out of the Cryptography module at TU Dresden.
 - Deployed the service behind Azure API Management with TLS certificates from Key Vault — got familiar with how API gateways work in practice (WAF and advanced policies are next on my list).

WORK EXPERIENCE

Student Research Assistant – Civil Engineering · [TU Dresden](#)

02.2025 – 07.2025

- Wrote a C++/Qt application that reads from multiple measurement sensors in parallel and stores the data in structured files for later analysis. Git, code reviews, documentation.

Student Research Assistant – Mechanical Engineering · [TU Dresden](#)

11.2024 – 03.2025

- Built a Python/Qt tool to automate a measurement workflow that was previously done by hand. Worked in a mixed team of engineers and CS people.

After the SHK positions I chose not to take on additional student jobs — I wanted to focus fully on finishing my degree and spending the remaining time building real Azure projects, which felt more relevant to where I want to go professionally.

EDUCATION

B.Sc. Informatik — TU Dresden

2023 – Sep 2025

Relevant modules: Service & Cloud Computing (Komplexpraktikum) · Network Security (DMZ & Firewalls lab) · Cryptography · Advanced Computer Networks (SDN)

Abitur — Technische Wissenschaften · [Tunisia](#)

2022 | Grade: 1.9

CURRENTLY LEARNING & LANGUAGES

Azure Fundamentals & Azure Administrator (Microsoft Learn) · Kubernetes for Beginners (KodeKloud) | **Arabic C2** · **German C1** · **English C1** · **French C1**
